Enes Batuhan AY

For Php

For this project , I used my old PHP codes for basic connect data base, admincheck, usercheck, log in, log out, error or some sessions.I did some math operators inside of php.Mostly i called or send informations to data table

For Table

First I made a users table and add inside user's information. Than i add Flat table and add inside residents informations.

Third i did actions table to show old actions list to user or admin

For Css

Mostly ı used w3school codes.

User use cases:
- see due history
- pay due
- login
- register
- see collected money
- see due
- pay due
- see resident list
- log out

Admin use cases:
- see unpaied
- make expenses
- see expenses
- add resident
- delete resident
